

FAIZAN HAMEED TANTRAY

Software Engineer | Full-Stack Developer | Agentic AI Engineer

Jammu & Kashmir, India | faizanhameed690@gmail.com | +91 91495 22458

Portfolio: faizcasm.me | GitHub: github.com/faizcasm | LinkedIn

PROFESSIONAL SUMMARY

Software Engineer and Full-Stack Developer with hands-on experience building scalable web applications, backend systems, real-time platforms, APIs, and production-oriented software. Strong foundation in TypeScript, JavaScript, Node.js, React, PostgreSQL, MongoDB, Redis, REST APIs, WebSockets, Docker, and modern backend architecture. Currently specializing in Agentic AI engineering, with a focus on AI systems capable of tool use, multi-step execution, state management, memory, planning, structured outputs, RAG, and reliable workflow execution. Founder and Lead Backend Engineer of Wolvinix and creator of BackendOS, an open-source backend framework/toolkit.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL

Frontend: React.js, Next.js, Redux, Tailwind CSS

Backend: Node.js, Express.js, NestJS, REST APIs, WebSockets, Microservices, Event-Driven Architecture

Databases: PostgreSQL, MongoDB, Redis

Agentic AI: AI Agents, Agent Loops, Tool Calling, Planning, State Management, Memory, RAG, Embeddings, Structured Outputs, Human-in-the-Loop, LLM APIs, LangChain, LangGraph, pgvector

Cloud & DevOps: Docker, AWS EC2, AWS IAM, NGINX, GitHub Actions, CI/CD, Linux

Engineering: System Design, Distributed Systems, API Design, Authentication, Caching, Rate Limiting, Performance Optimization, Scalable Architecture

Tools: Git, GitHub, VS Code, Linux

PROFESSIONAL EXPERIENCE

Founder & Lead Backend Engineer | Wolvinix

Jan 2024 – Present

- Architected backend infrastructure for a gaming-focused social platform using Node.js and TypeScript.
- Designed scalable REST APIs, authentication systems, and real-time communication using WebSockets.
- Integrated Redis for high-performance communication and caching use cases.
- Containerized services and developed production-oriented deployment workflows using Docker.
- Worked on database integration, API performance, scalability, and backend reliability.

Full Stack Intern | Infosys

Oct 2024 – Dec 2024

- Developed backend services using Node.js and PostgreSQL.
- Implemented Redis-based caching to improve application performance.
- Contributed to full-stack application development, API integration, and CI/CD workflows.
- Worked with modern software engineering and deployment practices.

Backend Developer Intern | Arcnet IT Solutions

- Developed and maintained backend APIs for production-oriented applications.
- Worked with database integration, query optimization, and backend performance improvements.
- Contributed to application reliability and scalable backend functionality.

Full Stack Intern | Upskill Mafia

Aug 2023 – Feb 2024

- Developed full-stack application features using modern JavaScript technologies.
- Built and integrated REST APIs, dashboards, and user-facing application functionality.
- Contributed to authentication, security, and application improvements.

SELECTED PROJECTS

BackendOS | Open-Source Backend Framework / Toolkit

- Designed an open-source backend framework focused on production-grade application architecture.
- Built reusable modules for authentication, API architecture, middleware, and database integration.
- Focused on modularity, maintainability, and reusable engineering primitives.
- Technologies: TypeScript, Node.js, Express.js, PostgreSQL, REST APIs.
- GitHub: github.com/faizcasm/BackendOS

Locrave | Full-Stack Location Discovery Platform

- Developed a location-based full-stack platform with secure authentication and scalable APIs.
- Designed backend services and database interactions and optimized database queries for performance.

- Technologies: React, TypeScript, Node.js, PostgreSQL, REST APIs.

Wolvinix | Real-Time Gaming Social Platform

- Built a gaming-focused social platform with real-time communication capabilities.
- Implemented WebSocket-based communication, Redis-powered backend functionality, authentication, and scalable APIs.
- Containerized backend services using Docker.
- Technologies: React, TypeScript, Node.js, WebSockets, Redis, PostgreSQL, Docker.

Zanly | Scalable Backend Architecture Project

- Designed backend architecture demonstrating caching, rate limiting, API optimization, and scalable request handling.
- Focused on performance engineering and distributed-system concepts.
- Technologies: Node.js, TypeScript, Redis, REST APIs, PostgreSQL.

AGENTIC AI ENGINEERING

Current specialization focused on designing intelligent systems beyond simple LLM API integrations, including:

- Agent loops and autonomous task execution; tool selection and tool calling.
- Multi-step agents, planning, task decomposition, state management, and memory.
- RAG, embeddings, vector search, structured agent outputs, and human-in-the-loop workflows.
- LLM streaming, Server-Sent Events (SSE), agent error recovery, and AI application architecture.
- Agent evaluation and reliability.

EDUCATION

Master of Computer Applications (MCA)

National Institute of Electronics & Information Technology (NIELIT), Srinagar | Currently Pursuing

Bachelor of Computer Applications (BCA)

Punjab Technical University | 2023 – 2026 | Completed

OPEN SOURCE & ENGINEERING

- Founder and Lead Backend Engineer of Wolvinix.
- Creator of BackendOS, an open-source backend framework/toolkit.
- Focused on scalable backend architecture, distributed systems, AI engineering, and developer tooling.
- Experienced with Git/GitHub development workflows and practical system architecture.
