

Faizan Hameed

SOFTWARE ENGINEER | BACKEND & DISTRIBUTED SYSTEMS | FULL-STACK | AGENTIC AI / LLM ENGINEERING

Jammu & Kashmir, India • +91 91495 22458 • faizanhameed690@gmail.com • Portfolio: faizcasm.me • GitHub: github.com/faizcasm

PROFESSIONAL SUMMARY

Software Engineer with 5 years of development experience building backend systems, full-stack products, distributed services, real-time platforms, and production AI systems. Strong in TypeScript, Node.js, PostgreSQL, Redis, Docker, AWS, React, and Next.js, with hands-on experience designing agentic systems for planning, tool calling, RAG, memory, multi-agent workflows, structured outputs, human-in-the-loop controls, evaluation, observability, retries, and long-running execution. Founder and lead engineer of Ryuksaidso, a production-oriented agent reliability and control-plane platform. Uses AI coding and research tools to accelerate implementation, debugging, documentation, refactoring, and test generation, followed by human review, automated validation, security checks, and architecture verification before release.

CORE TECHNICAL SKILLS

Languages	TypeScript, JavaScript, SQL, Python
Backend	Node.js, Express.js, Fastify, NestJS, REST APIs, WebSockets, Microservices, Event-Driven Architecture
Frontend	React.js, Next.js, Redux, Tailwind CSS
Data	PostgreSQL, MongoDB, Redis, pgvector, Prisma
AI / Agents	AI Agents, Multi-Agent Systems, Planning, Tool Calling, Memory, RAG, Embeddings, Structured Outputs, HITL, LangChain, LangGraph
LLM Engineering	Local LLMs, Secure LLM Harnesses, Fine-Tuning, LoRA/QLoRA, Quantization, GGUF, Inference Optimization, Model Routing
Cloud / DevOps	AWS EC2, AWS IAM, Docker, Docker Compose, NGINX, CI/CD, Linux, Prometheus, Grafana, Loki
Engineering	System Design, Distributed Systems, API Security, Authentication, RBAC, Rate Limiting, Caching, Observability, Performance, DSA

PROFESSIONAL EXPERIENCE

Founder & Lead Software / AI Engineer | Ryuksaidso

2026 – Present

- Built and deployed Ryuksaidso, a production-oriented agent reliability and control-plane platform for operating AI agents with software-engineering discipline.
- Designed the control plane for agent definitions, tools, providers, versions, runs, traces, approvals, policies, API keys, RBAC, tenant isolation, audit history, and operational visibility.
- Implemented agent runtime capabilities for planning, task decomposition, tool calls, memory/state, structured outputs, retries, recovery, approvals, execution traces, and long-running jobs.
- Built asynchronous execution with Redis and BullMQ workers, separating synchronous API traffic from long-running workloads for reliability and horizontal scaling.
- Implemented PostgreSQL + Prisma for transactional state, pgvector for semantic retrieval, and Redis for queues, caching, locks, and coordination.
- Integrated OmniRoute, Ollama, and OpenAI-compatible providers with local/cloud routing, retries, failover, and support for quantized/fine-tuned models.
- Built Dockerized production infrastructure on AWS EC2 behind NGINX with IAM, security groups/firewall controls, rate limiting, health/readiness checks, and isolated service boundaries.
- Added Prometheus, Grafana, Loki, audit streams, agent traces, worker visibility, and operational diagnostics. Uses AI tools to accelerate implementation and investigation while retaining human code review, validation, security checks, and architecture ownership.

Full Stack Engineer | Locrave

Dec 2025 – Apr 2026

- Developed and maintained a location-based full-stack platform with secure authentication, scalable APIs, and production-oriented application architecture.
- Built frontend and backend functionality using React, TypeScript, Node.js, PostgreSQL, and REST APIs; designed database interactions, optimized queries, integrated APIs, and contributed to application performance and reliability.

Founder & Lead Backend Engineer | Wolvinix

2024 – 2025

- Architected backend infrastructure for a gaming-focused social platform using Node.js and TypeScript.
- Designed scalable REST APIs, authentication, authorization, and WebSocket-based real-time communication; integrated Redis for caching and high-performance workloads.
- Containerized backend services and deployment workflows with Docker, with hands-on ownership across database integration, API performance, scalability, reliability, and production deployment.

Backend Developer Intern | Arcnet IT Solutions

Professional Experience

- Developed and maintained backend APIs for production-oriented applications.
- Worked on database integration, query optimization, backend performance, reliability, and scalable application functionality.

Full Stack Intern | Upskill Mafia

Aug 2023 – Feb 2024

- Developed full-stack application features using modern JavaScript technologies.
- Built REST APIs, dashboards, authentication flows, and user-facing functionality.

RYUKSAIDSO | PRODUCT & ENGINEERING

[Live product: ryuksaidso.online](https://ryuksaidso.online)

Production-oriented agent reliability and control plane designed to operate AI agents with production software discipline. The platform centers on planning, tracing, approvals, evaluations, versioning, knowledge retrieval, and multi-provider failover.

Control Plane	Next.js/React dashboard for users, workspaces, agents, tools, providers, runs, approvals, traces, analytics, profiles, and administration.
API Layer	Stateless TypeScript/Node.js services with validation, authentication, RBAC, rate limiting, provider routing, health/readiness endpoints, and horizontal-scaling support.
Agent Runtime	Planning, task decomposition, tool calls, memory/state, structured outputs, retries, human approval, execution traces, and recovery.
Async Compute	Redis + BullMQ workers for long-running agent execution, browser automation, ingestion, scheduled jobs, retries, and workload isolation.
Data Layer	PostgreSQL + Prisma for transactional data, pgvector for semantic retrieval, and Redis for queues, caching, locks, and coordination.
LLM Layer	OmniRoute, Ollama, and OpenAI-compatible providers with local/cloud routing, quantized/fine-tuned model support, and controlled tool execution.
Infrastructure	Dockerized services on AWS EC2 behind NGINX with IAM, security groups/firewall controls, service isolation, health checks, and controlled network exposure.
Reliability & Safety	Human-in-the-loop approval gates, restricted tool permissions, policy enforcement, structured validation, auditability, retries, timeouts, and persistent execution state.
Observability	Prometheus metrics, Grafana dashboards, Loki logs, audit trails, agent traces, worker visibility, and operational health monitoring.

SELECTED PROJECTS

Wolvinix | Real-Time Gaming Social Platform

- Built a gaming-focused social platform with real-time communication, authentication, scalable APIs, Redis-backed functionality, and Dockerized backend services.
- Stack: React, TypeScript, Node.js, WebSockets, Redis, PostgreSQL, Docker.

BackendOS | Open-Source Backend Framework / Toolkit

- Designed reusable production-oriented backend primitives covering authentication, API architecture, middleware, and database integration.
- Repository: github.com/faizcasm/BackendOS

ENGINEERING HIGHLIGHTS

- Data Structures & Algorithms: Solved 150+ DSA problems across core algorithmic patterns and problem-solving techniques.
- Agentic AI: Design and implement autonomous and supervised agents, multi-agent coordination, planning, tool execution, memory, RAG, stateful workflows, evaluation, streaming, and recovery.
- LLM Systems: Build secure local-LLM harnesses, work with quantized models and GGUF workflows, fine-tune adapters, optimize inference, and implement model/provider routing.
- Production Engineering: Dockerized services, AWS EC2 deployment, NGINX reverse proxy, background workers, observability, caching, rate limiting, authentication, RBAC, and reliability patterns.
- AI-Assisted Engineering: Use AI tools as force multipliers for implementation, research, debugging, refactoring, documentation, and testing while retaining responsibility for correctness, security, architecture, and final code review.

EDUCATION

Master of Computer Applications (MCA) | National Institute of Electronics & Information Technology (NIELIT), Srinagar | Currently Pursuing
Bachelor of Computer Applications (BCA) | Punjab Technical University | 2023 – 2026 | Completed

LEADERSHIP & OPEN SOURCE

Founder, Ryuksaidso - agent reliability/control plane, agent orchestration, automation, secure local AI, and scalable backend systems.
Creator, BackendOS - open-source backend framework/toolkit for reusable production-oriented application architecture.
